

# Cable-Stayed *Nissibi Bridge*

In making this bridge a reality, all the technical device, equipment, engineering services and labor were 100% domestic.

Each pylon was constructed on 1 Decare.

It carries 650.000 vehicles per year.

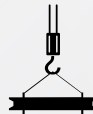

Constructed in just 900 days, The Nissibi Bridge set a new safety record, with no deaths or bodily harm caused by accidents.

The Nissibi Bridge construction site has been visited by a vast number of academics and students from technical universities all over the country.

The steel segments were pre-manufactured and transported to the site by special trailers.

The steel segments were installed by heavy lifting equipment from the lake reservoir.

Turkey's 3rd longest spanned bridge (2015)
